

SPOTIFY ANALYSIS

Project: Blanket Sales Analysis Dashboard (POWER BI)

Business Requirement

The goal of the project is to conduct a comprehensive analysis of blanket sales performance, customer satisfaction, and inventory distribution. The purpose is to uncover key insights and identify opportunities for optimization using various KPIs and visualizations. While the original intent was to create the dashboard in Power BI, it was instead developed using Microsoft Excel.

KPI Requirements

Total Sales: The overall revenue generated from all items sold.

Average Sales: The average revenue per sale.

Number of Items: The total count of different items sold.

Average Rating: The average customer rating for each item sold.

Chart Requirements (with Objectives and KPI Connections)

1. Total Sales by Fat Content

Objective: To analyze how different fat content levels impact total sales, along with variations in average sales, item count, and customer ratings.

Chart Type: Donut Chart

2. Total Sales by Item Type

Objective: To understand the impact of different item types on total sales and other KPIs like average sales, number of items, and ratings.

Chart Type: Bar Chart

3. Fat Content by Outlet for Total Sales

Objective: To compare total sales across various outlets segmented by fat content, while also reflecting other KPIs.

Chart Type: Stacked Column Chart

4. Total Sales by Outlet Establishment

Objective: To evaluate how the age and type of outlet establishments influence total sales.

Chart Type: Line Chart

5. Sales by Outlet Size

Objective: To analyze the correlation between outlet size and total sales.

Chart Type: Donut Chart or Pie Chart

6. Sales by Outlet Location

Objective: To assess the geographic distribution of sales across different locations, including tier 1, tier 2, and tier 3 cities.

Chart Type: Funnel Chart

7. All Metrics by Outlet Type

Objective: To provide a comprehensive view of all KPIs (total sales, average sales, item count, and average rating) broken down by different outlet types.

Chart Type: Matrix Card

Additional Insights (Tracks):

LY (Latest Year) vs PY (Previous Year) Trends: Analyzes differences in track engagement between the most recent two years.

YoY (Year-on-Year) Growth Analysis: Measures annual change in track listening behavior to understand overall growth and interest.

Listening Patterns

1. Listening Hours Analysis

Purpose: To identify peak listening hours and days.

Method: Utilizes a heatmap where color intensity highlights the concentration of listening activity throughout the week and across hours of the day.

Insight: Helps discover preferred times of listening, such as morning commutes, late nights, or weekend peaks.

2. Average Listening Time vs. Track Frequency (Quadrant Analysis)

Purpose: To categorize tracks based on both how frequently they are played and how long they are listened to on average.

Method: A scatter plot divided into four quadrants:

High Frequency & High Listening Time: Most engaging tracks.

Low Frequency & High Listening Time: Niche but impactful tracks.

High Frequency & Low Listening Time: Short and frequently played tracks.

Low Frequency & Low Listening Time: Less popular tracks.

Insight: Enables better understanding of user engagement patterns for specific tracks.

Details Grid

This section of the report is dedicated to providing a dynamic and interactive grid-based view of Spotify data. It allows users to explore core details at a glance with powerful interactivity features for deeper insights.

1. Grid View with Essential Fields

Purpose: To display crucial information such as album name, artist name, track name, and other relevant attributes.

Insight: Offers a structured, tabular representation of key data for easy scanning and comparison.

2. Drill-Through Functionality

Purpose: Allows users to click into main reports and explore underlying data layers.

Insight: Users can dive into specifics and export detailed data (e.g., to CSV) based on their requirements.

3. Drill-Down and Drill-Up Hierarchy

Purpose: Supports hierarchical data exploration, enabling users to navigate between summary and detailed views.

Insight: Enhances interactivity and user control in analyzing data from a broad to granular perspective.
